DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/14/08 has been entered.

Response to Amendment

2. The Examiner has carefully considered Applicant's amendments and accompanying remarks filed with the RCE dated 04/14/08. Applicant's amendments to the claims have been entered and are made of record.
3. The previously made art rejection made over Matsui et al in view of Samuelson et al further in view of Buglino et al. is withdrawn.
4. The Double Patenting rejection is maintained and held in abeyance as suggested by Applicant.

Response to Arguments

5. Applicant's arguments with respect to claims 18, 22, 24-32 and 36 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 18, 22, 24-32 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by USPN 5814567 issued to Yahiaoui et al.
7. USPN 5814567 issued to Yahiaoui et al. discloses making disposable absorbent porous substrate which is substantially uniformly (column 2, lines 44-52) coated with a hydrophilic polymeric material (abstract). The substrate may be a sheet like material such as a sheet of foamed material or a fibrous web, such as a woven or nonwoven web (column 2, lines 1-5), preferable polyolefin (claim 4), polypropylene nonwoven webs (see working examples). The nonwoven webs can be meltblown or spunbonded (claim 15 and column 7, lines 1-5). The hydrophilic coating maybe a polysaccharide or a modified polysaccharide, such as modified cellulose further having a pendant monovalent ethyl hydroxyethyl group (column 2, lines 5-28 and column 7, line 46). With regard to coating weight, this is shown in Example 2 and claim 1.
